Maximum Marks	4 Marks

Empathy Map Canvas:

User Profile: Clinical Research Analyst / Healthcare Professional

1. What does he THINK and FEEL?

- Wants to see the "Big Picture": Needs to move beyond individual patient rows to see how lifestyle habits affect the whole population.
- Concerned about Accuracy: Worried that manual calculations of BMI or risk categories might lead to human error in diagnosis.
- Aspirations: Wants to implement a data-driven "Preventive Care" model rather than just treating symptoms.
- Major Preoccupation: How to simplify complex data so it can be easily explained to a non-technical patient.

2. What does he HEAR?

- From Colleagues: "We are seeing a massive spike in heart disease among younger, sedentary workers."
- From Patients: "I don't understand these clinical reports; just tell me how much at risk I am."
- From Management: "We need to optimize our medical resources and target the most vulnerable groups first."

3. What does he SEE?

- The Environment: Overwhelming spreadsheets and fragmented hospital databases (SQL/CSV files).
- Market Trends: A shift toward using Business Intelligence tools like Tableau for clinical decision-making.
- The Reality: High correlation in the charts between high BMI, lack of sleep, and heart disease incidents.

4. What does he SAY and DO?

- Public Attitude: Advocates for healthy lifestyle changes and regular physical activity.
- Behavior: Spends hours analyzing data but gets frustrated when charts aren't interactive or filtered correctly.
- Current Action: Uses SQL to clean data and connects it to Tableau to visualize "Gender vs. Heart Disease" and "Age Categories."

PAIN (Fears & Frustrations)

- Fear: Missing a critical correlation (like the link between sleep time and stroke) due to poor visualization.
- Frustration: Data is "dirty" or inconsistent (e.g., varied entries for diabetic status), making analysis slow.
- Obstacle: The "Upgrade" prompts in software or technical barriers in publishing dashboards for the team to see.

GAIN (Wants & Needs)

- Need: A "Patient Risk Score" (0–5) that instantly summarizes a patient's health profile.
- Want: An interactive dashboard where clicking on "Smoker" automatically updates all other charts.
- Success Measure: Being able to provide a data-backed recommendation to a policymaker in under 5 minutes.

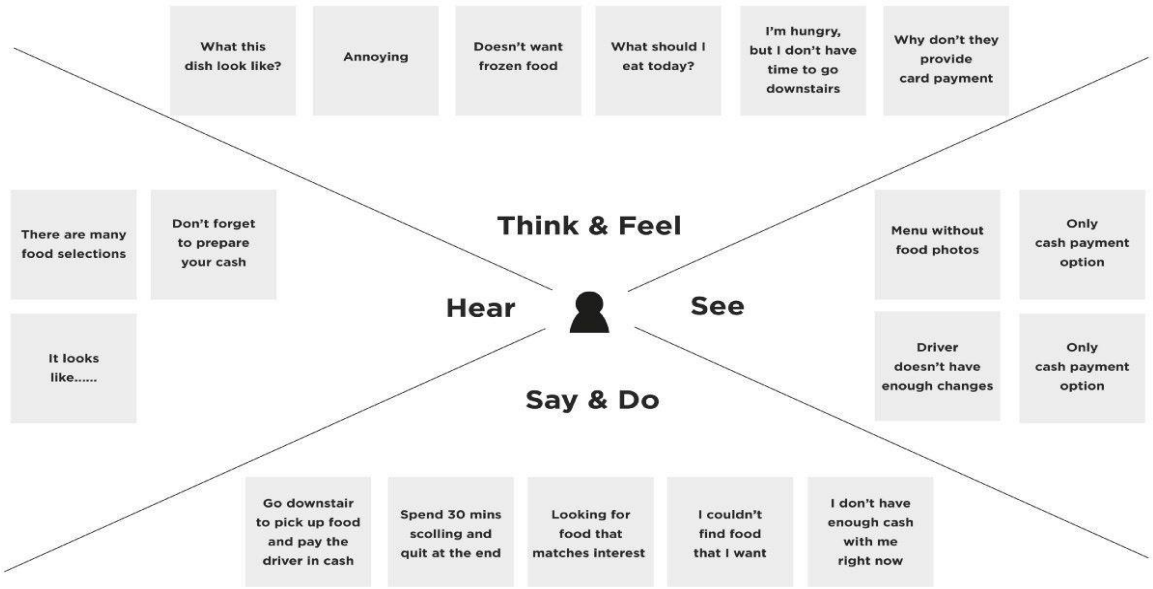
Business Model **Toolbox**



Pain

- Hard to find their food interests
- Uncomfortable paying cash
- Looking for food that matches interest

Gain

- Comfortable
- Accuracy
